Hey John-

Here is a map that had GC2 and the associated well pads. I clipped this from our mapping tool. I will get a better, well-marked map for next week!

Rachel

Hi Rachel. I'll be happy to send you a confirmed list of inspection team members when available. Thanks for the instructions for checking in on site. Glad to know you're able to participate most of the day.

If you have a recent map of GC2 and associated well pads, I'd appreciate getting that in advance if possible. Otherwise, we'll ask for one when we arrive.

Sincerely,

John Pavitt, Air Compliance Inspector
Air and Toxics Enforcement Section

John-

On Tuesday morning (8am) we will be meeting at GC2 in the Crowsnest. This is where the majority of offices and conf. room space is. As you drive onto the GC2 pad, it is to the right hand side off the pad (not at the actual facility). I think the signage says CC2 and/or crowsnest.

I will be there for most of the day with you all although, I have to catch a flight home Tuesday so I'll probably part with the group and leave you in good hands with our OGI team and an environmental advisor around 2 or 2:30pm.

Do you have a list of who will be with you? Mostly just curious!

See you Tuesday!
Rachel

SCHEDULE CHANGE

Travis, I just had a quick call with Rachel Buckbee about the upcoming inspection. She asked if we can move it 1 day earlier to make it easier for her to participate, which is fine. The inspection is now scheduled for Tuesday, July 16.

Sincerely,

John Pavitt, Air Compliance Inspector
Air and Toxics Enforcement Section

Travis Rybicki
GC2 Onshore Site Manager

BPXA, GC2

Hello Travis. I'm sending this email to follow up on my phone call today. I called to let you know the Environmental Protection Agency (EPA) and Alaska Department of Environmental Conservation (ADEC) are planning a joint air compliance inspection at the GC2 facility in Prudhoe Bay, AK on Wednesday, July 17. Your phone number is listed in the GC2 Title V air permit as the facility point of contact.

The inspection will focus on compliance with New Source Performance Standards (NSPS), Subparts OOOO and OOOOa – Standards of Performance for Crude Oil and Natural Gas Facilities, under the Clean Air Act.

During the inspection, the inspectors will need access to areas subject to the rules, including well affected facilities and collections of fugitive emissions components. We will be taking photographs and videos with a digital camera and an optical gas imaging (OGI) camera, in addition to, measuring concentrations of VOC with a photo-ionization detector (PID). A hot work permit may be required from you to access these areas. Please confirm where we should check-in with you at the start of the inspection.

Thank you for your assistance in helping to coordinate this on-site inspection. Please let me know if you have any questions about this email or the inspection schedule.

Sincerely,

John Pavitt, Air Compliance Inspector
